# CATH LAB SUPPORT SYSTEM SAFE. SECURE. SIMPLE.

**F&H Innovative Products** are dedicated to the design of medical products to improve the hospital environment. We offer not only our products, but our services as well. When you place your order with us we will call your site to understand fully the needs that you face. All of our products can be customized at no additional costs to suit your individual Hospital needs. We look forward to working with you!

- The Cath Lab Support System (Patent Pending) was designed to secure and support patients during routine medical diagnostic procedures, such as angiography/angioplasty, EP cases etc.
- The radiolucent Strap System wraps the patient's midsection and is easily adjusted to each patient's size. Strap extensions are also available for very large circumference patients.
- Our simple design permits normal table panning without table modification, easy IV access and can be quickly removed for emergency access.
- The adjustable strap system can be ordered to any length to secure any size patient and even encompass the arm boards.
- The entire System is made of durable Polymer material. All parts are removable for easy cleaning with ordinary soap and water.
- The components of the system are interchangeable and replaceable. Periodic replacement ensures that the patient support system integrity is maintained during cases. We suggest replacing yearly or when visibly worn.
- A simple low cost way to reduce the risk of patient falls and give the patient added security.

## Set up in three minutes.

CUSTOM FIT TO ANY CATH TABLE  
ADJUSTABLE OUTER STRAPS  
INDUSTRIAL VELCRO® CLOSURES

## Why use the Cath Lab Support System?

- Patient falls are among the most common occurrences reported in hospitals and are a leading cause of death in people ages 65 or older.
- Typical catheterization and surgical table design are relatively narrow (some less than 20" wide). While this allows for physicians to work on the patient easily, it does not allow for much error for health care provider when positioning the patient.
- Patient undergoing a procedure may be medicated prior to arrival at the surgical suite or on other medications affecting their cognitive ability to balance or hold on to the table.
- The Cath Lab Support System (Patent Pending) gives the health care provider the confidence to ensure that the patient is secure throughout their procedure.
- The Support System can be retrofitted to nearly all exam tables you have in your institution and when properly installed is designed to support up to 500 lbs (227 kg).

*Eliminating the risk of patient falls and the subsequent potential for legal action makes the Cath Lab Support System a wise investment. I have a feeling of confidence that we're doing all we can to prevent patient falls.*
